Essential for Endoscopic Spine Surgery

- Compatible with all Spine Scopes
- Regain Visualization After Red Out
- Navigational Access
- Annulus Modulation
- Nucleus Ablation
- Tactile Feedback

Our Technology...See The **elliquence** Difference

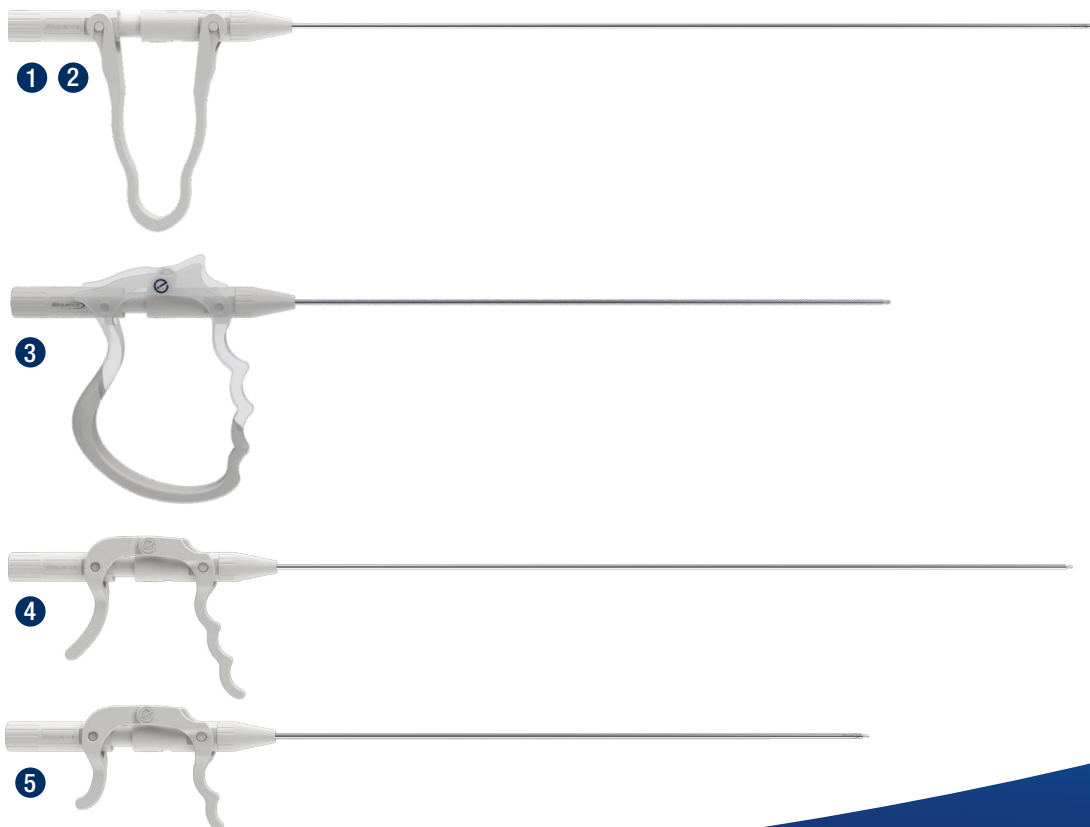

elliquence® has manufactured innovative radiofrequency systems and electrodes since 1959. The Trigger-Flex® handpiece combined with the Surgi-Max® High Frequency Radiowaves is designed for minimally invasive procedures such as endoscopic spine surgery. While laser and most electrosurgical devices are heat driven and imprecise, the Surgi-Max® provides unparalleled surgical precision at a much lower temperature allowing it to gently target tissue with minimal damage to surrounding healthy tissue.

Trigger-Flex®

Essential for Endoscopic Spine Surgery

Product Information and Codes

- ① DTF-40: Working Length: 40cm Straight
- ② DTF-18: Working Length: 18cm Straight
- ③ Trigger-Flex Pro DTF-32: Working Length: 33cm Straight
- ④ DTF-38: Working Length: 38cm Straight
- ⑤ DTF-31: Working Length: 31cm Straight

Used exclusively with Surgi-Max® Radiowave Technology

Articulated Surgical Precision for targeted areas

Low Heat Temperatures allow minimal damage to surrounding tissue
